FOR IMMEDIATE RELEASE

Pfannenberg to Showcase New Thermal, Signaling and Safety Solutions at SPS 2026

New thermal technologies, advanced safety solutions and digital planning tools will give visitors an early look at the next generation of Pfannenberg solutions

Pfannenberg, a global leader in thermal management and signaling solutions, will showcase its latest developments in **Thermal Solutions for Enclosures and Machines** and **Signaling & Safety Solutions** at SPS 2026, November 24 to 26 in Nuremberg, Germany.

Visitors can explore **Thermal Solutions for Enclosures and Machines in Hall 3C, Booth 250** and **Signaling & Safety Solutions in Hall 4, Booth 300**, where Pfannenberg specialists will introduce new technologies and help visitors identify solutions for their specific applications.

"At SPS, we want you to experience what makes Pfannenberg who we are: our people, our relationships, and our commitment to supporting you. The Pfannenberg Experience starts with listening to your challenges, connecting you with the right experts, and finding solutions together. We are here to make a complex world simpler and to be a partner you can count on long after the exhibition," said Dr. Tobias Merl, CEO of Pfannenberg.

New Thermal Solutions for Enclosures and Machines

Pfannenberg will provide an early look at the next generation of its thermal management portfolio, including **new cooling unit developments and a preview of its Next Generation Filterfans**. Additional product details will be revealed at SPS.

Also featured will be the updated **Green Series portfolio**, giving customers greater flexibility to select refrigerant technologies based on their specific application, performance, safety and regulatory requirements.

Advancing Signaling & Safety

Pfannenberg's Signaling & Safety Solutions will feature **IO-Link status indication, Functional Safety and digital 3D-Coverage planning**, helping customers improve machine safety while simplifying configuration, diagnostics and application planning.

For the first time, Pfannenberg will also showcase new **Cabinet Refrigerant Leak Detection Systems** and **Cabinet Fire Extinguishing Systems**, expanding its safety solutions to help detect and respond to critical risks inside electrical enclosures.

Digital Tools Simplify Application Planning

Visitors will also have the opportunity to experience Pfannenberg's next generation of digital planning and configuration tools, including the new **Thermal and Signaling PSS 2.0 software**.

These digital tools are designed to help customers evaluate their application requirements, configure appropriate solutions and simplify planning before installation.

###

About Pfannenberg
Pfannenberg is recognized as a leading global manufacturer of Thermal Management, Liquid Cooling Solutions and Signaling Solutions. In 1958, Pfannenberg invented the Filterfan®, which continues to be recognized worldwide as a leading product for managing temperatures in electrical enclosures. Its business philosophy is: **Protecting People, Machines and the Environment.**
